

Pressure relief valves, DHV 712-R

URL: <https://www.sxplc.com/pressure-relief-valves-dhv-712-r>

Product data sheet

Nominal size DN::

10 - 50

Material sealing element (in contact with medium):

EPDM | FPM | PTFE

Material diaphragm:

PTFE (EPDM)

Connection:

Socket | Spigot | Flange

- most powerful thermoplastic pressure relief valve with patented piston control
- for constant working pressures even in systems with counterpressure
- constant, low vibration control behaviour
- simple pressure setting possible at any time, also during operation
- Locks in rest position 100% against back pressure from the valve outlet, suitable for the construction of dosing or injection points
- Pressure gauge preparation optional
- reliable reduction of pressure peaks and pulsations
- EPDM diaphragm, PTFE-coated on the medium side
- pressure setting range 0.3 to 10 bar
