Product data sheet

Technical Features[-]

Free-flow, nose-to-side check valves are on/off circuit components that allow free flow from the inlet (port 1) to the outlet (port 2) and block flow in the opposite direction.

- Two-port check valves share the same cavity for a given frame size, however, pay close attention as flow paths may be in opposite directions.*
- Check valves offer extremely low leakage rates with a maximum leakage of less than 1 drop per minute (0.07 cc/min).*
- Will accept 5000 psi (350 bar) at ports 1 and 2.*
- Cartridges configured with EPDM seals are for use in systems with phosphate ester fluids. Exposure to petroleum based fluids, greases and lubricants will damage the seals.*
- Corrosion resistant cartridge valves are intended for use in corrosive environments and are identified by the model code suffix /AP or /LH (see CONFIGURATION section). For further details, please see the Materials of Construction page.*
- Incorporates the Sun floating style construction to minimize the possibility of internal parts binding due to excessive installation torque and/or cavity/cartridge machining variations.*
